# Abstract

## Outline(s): Table of Contents

# Chapter 1

## Introduction

### 1.1 Introduction

10% of Grade:

- introduces and motivates the core question or problem
- provides context for discussion (places issue within a larger debate or sphere of relevance)
- states precise thesis or position the author will argue for
- provides roadmap indicating structure and key content points of the essay

~ 14% of text ~ 4200 words

- introduces and motivates the core question or problem

Testing crossreferencing graphics Figure 1.1.

### 1.2 Motivation: Problem Statement

### 1.3 Motivation: Research Question

- provides context for discussion (places issue within a larger debate or sphere of relevance)

### 1.4 Scope: Aim & Context of the Research

### 1.5 Significance of the Research: Theory of Change

- states precise thesis or position the author will argue for

Figure 1.1: Caption/Title 2

## 1.6 Thesis Statement & Position: (Aim of the Paper)

- provides roadmap indicating structure and key content points of the essay

## 1.7 Overview: Structure & Approach of the Paper (Roadmap — Theory of Change)

## 1.8 Table of Contents

## 1.9 Problem Statement — Motivation

Continued AI Progress:

- Rapid advancements in AI technology increase both potential benefits and risks.

Existential Risks (AI X-Risk):

- Advanced AI systems could pose significant threats if misaligned with human values.

Complexity Challenges:

- The intricate nature of AI systems complicates policy formulation and understanding.

Limitations of Current Approaches:

- MTAIR’s Reliance on Human Labor:
  - Modeling Transformative AI Risks (MTAIR) is constrained by manual cognitive efforts.
- Need for Automation:
  - Scaling and automating risk modeling is essential to keep pace with AI developments.

Opportunity:

- Leveraging new technologies to enhance our ability to model and mitigate AI risks.

## 1.10 Aim of the Paper

### 1.10.1 Research Question & Scope

**Can frontier AI technologies be utilized to automate the modeling of transformative AI risks, so as to allow for the prediction of policy impacts?**

Frontier AI Technology: Today’s most capable AI systems (e.g. GPT4 level LLMs)

Scaling Up: Automating the previously “manual” cognitive labor

Modeling: Formalizing the world views underlying arguments

Transformative AI: Level of AI capabilities defined by severe impact on the world

Safety & Governance Literature: Publications, reports etc. concerned with risks from AI

Automated Estimation: Non-manual (AI systems + scaffolding), quantified evaluations

Probability Distributions: Formal expressions of the expectations over future worlds

Conditional Trees of Possible Worlds: “If ... then...” reasoning over ways things may play out

Forecasting Policy Impacts: Qualitative & quantitative evaluation of expected outcomes

## 1.10.2 Significance of the Research

## 1.11 Theory of Change — Approach & Structure of the Paper

Multiplicative Benefits:

- Automation  $\times$  Live Prediction Market Integrations  $\times$  Policy Impact Evaluations

Explanation:

Automation:

- Increases efficiency and scalability of risk modeling.

Live Prediction Markets:

- Provides up-to-date, collective intelligence to inform models.

Policy Impact Evaluations:

- Improves the accuracy and relevance of policy assessments.

Outcome:

- Enhanced ability to develop effective policies that mitigate AI risks.

Visual Aid:

- A diagram illustrating how each component amplifies the others, leading to greater overall impact.

## 1.12

## 1.13 Overview / Table of Contents

# Chapter 2

## Context

### 20% of Grade:

- demonstrates understanding of all relevant core concepts
- explains why the question/thesis/problem is relevant in student's own words (supported by quotations)
- situates it within the debate/course material
- reconstructs selected arguments and identifies relevant assumptions
- describes additional relevant material that has been consulted and integrates it with the course material as well as the research question/thesis/problem

~ 29% of text ~ 8700 words

1. successively (chunk my chunk) introduce concepts/ideas — and 2. ground each with existing literature

## 2.1 Theoretical Background Considerations

## 2.2 Literature, Concepts & Terminology

### 2.2.1 DAG / BayesNets

### 2.2.2 State of the art (MTAIR) — Explanation

Carlsmith Model (Analytica)

### 2.2.3 (Intro) Example — Rain/Sprinkler/Lawn

/ Rain/Sprinkler/Lawn DAG / BayesNet — Extended Example

...

Own Position/Argument: AMTAIR ... Own Rain/Sprinkler/Lawn DAG / BayesNet Implementation

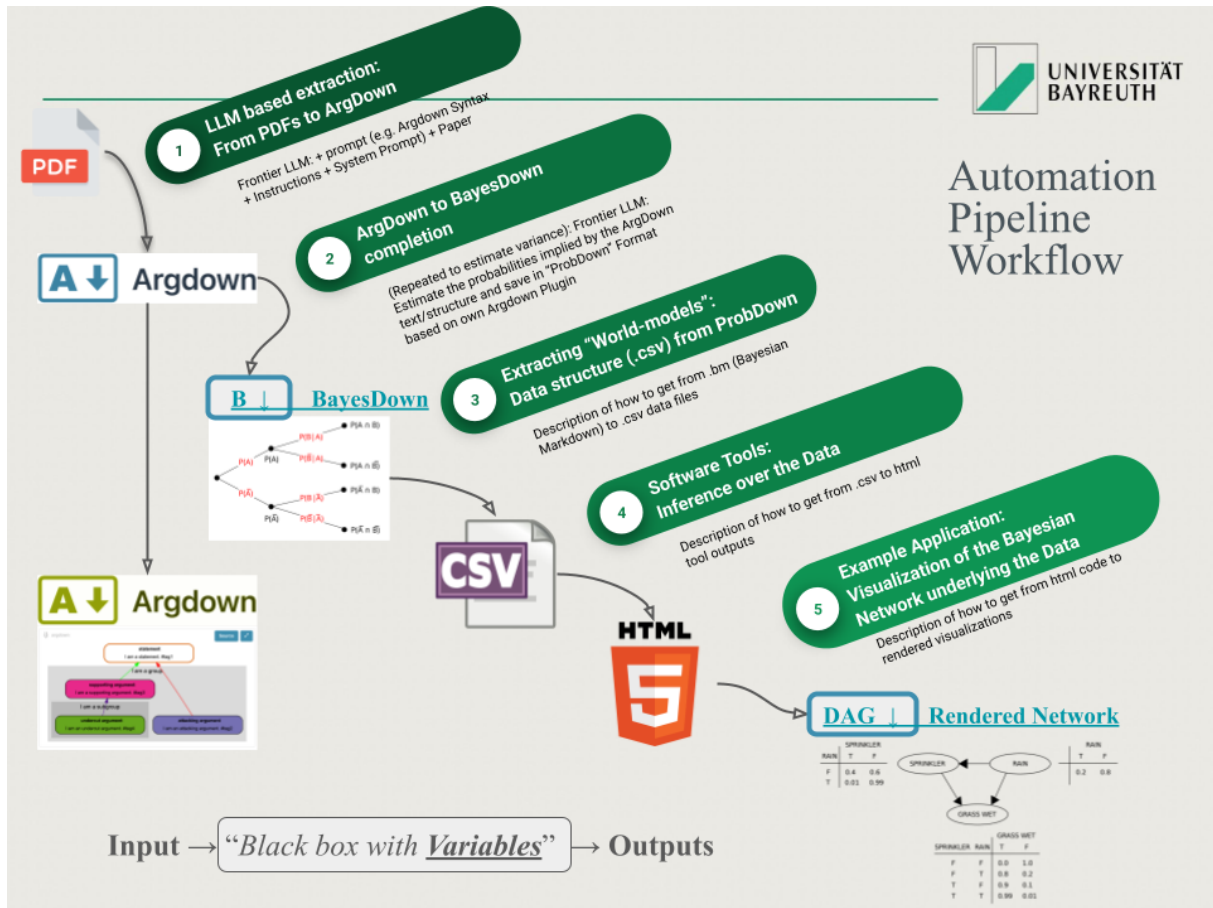

Figure 2.1: AMTAIR Automation Pipeline

## 2.3 Methodology

MTAIR / Carlsmith Model (Analytica) — Explanation (— is motivation: should come first)

### 2.3.1 Kialo

### 2.3.2 Rain/Sprinkler/Lawn DAG

### 2.3.3 BayeServer

### 2.3.4 BayesNet — Extended Example

### 2.3.5 Code + documentation

Testing crossreferencing graphics Figure 2.1.

# Chapter 3

## AMTAIR

### **3.0.1 20% of Grade: ~ 29% of text ~ 8700 words**

- provides critical or constructive evaluation of positions introduced
- develops strong (plausible) argument in support of author's own position/thesis
- argument draws on relevant course material claim/argument
- demonstrate understanding of the course materials incl. key arguments and core concepts within the debate
- claim/argument is original or insightful, possibly even presents an original contribution to the debate

### **3.1 Own Carlsmith Model Implementation — Explanation**

### **3.2 Own Implementation: Good example from a published paper**

### **3.3 Implementation**

TestText

### **3.4 Results**

TestText

# Chapter 4

## Insights & Findings

### 4.1 Automated Modeling Pipeline — From Academic Papers to Political Strategy

Success of Automation:

- Demonstrated feasibility of automated model extraction.  
Improved Forecasting:
- Enhanced accuracy with real-time data integration.  
Policy Analysis:
- Identified impactful policies through conditional forecasting.  
Scalability Achieved:
- Efficient processing of extensive data sets.  
Addressed Challenges:
- Overcame limitations of manual modeling.

### 4.2 Project Scaling — Workflow Pipeline & Automation

Scaling Opportunities:

- Horizontal: Incorporate more data sources.
- Vertical: Add detailed variables.

New Capabilities:

- Advanced analytics.
- Real-time data integration.

Requirements:

- Software Setup: Robust infrastructure.
- Financial: Funding for APIs and compute resources.

Impact:

- Broader, more comprehensive models.
- Enhanced policy analysis.

## 4.3 Computational Complexity — Computational Tractability

Challenges:

- High computational demands of complex models.

Solutions:

- Clustering Worldviews:
- Group similar perspectives to simplify models.
- Correlation Management:
- Adjust for variable interdependencies.
- Efficient Algorithms:  
Use optimized sampling methods like Monte Carlo.

Outcome:

- Achieved efficiency without sacrificing accuracy.

Link to Theory of Change:

- Scalability amplifies policy impact.

## 4.4 External Validation — Manual Extraction & Processing

Purpose:

- Assess accuracy of automated methods.

Comparison:

- Automation Strengths:

- Speed, consistency.
- Human Strengths:
- Nuanced understanding.  
Findings:
- Automation excels in data handling.
- Human oversight enhances quality.  
Conclusion:
- Optimal results from combining AI with expert input.

# Chapter 5

## Discussion

### 5.1 Discussion

10% of Grade: ~ 14% of text ~ 4200 words

- discusses a specific objection to student's own argument
- provides a convincing reply that bolsters or refines the main argument
- relates to or extends beyond materials/arguments covered in class

# Chapter 6

## Discussion — Exchange, Controversy & Influence

### 6.1 Challenges & Problems — Red Teaming Problems, Failures & Downsides

Potential Failures:

- Data Issues: Inaccurate or biased inputs.
- Model Limitations: Oversimplifications.
- Tech Risks: AI misinterpretations.

Red Teaming:

- Stress-testing models to find weaknesses.

Impact on Theory of Change:

- Identifying points of failure strengthens the approach.

### 6.2 Implications & Impact — Uptake, Feedback Loops, Uptake & Success – Green Teaming –

Potential Outcomes:

- First-Order: Reduced AI risks through better policies.
- Second-Order: Enhanced collaboration.
- Third-Order: Framework applied to other global risks.

Feedback Loops:

- Continuous model improvement.
- Adaptive policy-making.  
Green Teaming:
- Strategies to maximize positive impacts.

### **6.3 Known Unknowns & Unknown Unknowns — Input Data Example: Modeling Author Worldviews from Bibliographies Instead of Individual Papers**

Potential Outcomes:

- First-Order: Reduced AI risks through better policies.
- Second-Order: Enhanced collaboration.
- Third-Order: Framework applied to other global risks.  
Feedback Loops:
- Continuous model improvement.
- Adaptive policy-making.  
Green Teaming:
- Strategies to maximize positive impacts.

# Chapter 7

## Conclusion

### 7.1 The Current State of Things & How to Continue

10% of Grade: ~ 14% of text ~ 4200 words

- summarizes thesis and line of argument
- outlines possible implications
- notes outstanding issues / limitations of discussion
- points to avenues for further research
- overall conclusion is in line with introduction

### 7.2 Summary — Key Takeaways & Findings

#### 7.2.1 Assessing Policy Effects:

Evaluating how different policies alter  $P(\text{Doom})$ .

#### 7.2.2 Conditional Probability:

Calculating  $P(\text{Doom} \mid \text{Policy Alpha})$ .

#### 7.2.3 Methodology:

Update model parameters based on policy implementation.  
Recompute probabilities accordingly.

#### 7.2.4 Purpose:

Inform policymakers of potential policy effectiveness.  
Prioritize interventions that significantly reduce risks.

## **7.3 Outlook — Outlook & Next Steps / Further Research**

### **7.3.1 Scaling Up:**

- Include more variables and data sources.

### **7.3.2 Collaboration:**

- Partner with policymakers and researchers.

### **7.3.3 Technological Enhancements:**

- Employ advanced AI techniques.

### **7.3.4 Potential Impact:**

- Influence global AI governance.

### **7.3.5 Limitations of the Analysis**

### **7.3.6 Policy Implications & Recommendations**

### **7.3.7 Areas for Future Research**

### **7.3.8 Open Questions — Central/Remaining Questions & Feedback**

#### **Questions:**

- How can we improve automation accuracy?
- What challenges exist in policy implementation?
- How do we mitigate AI model biases?
- How can interdisciplinary efforts enhance outcomes?

#### **Feedback:**

- Invite thoughts, critiques, and suggestions.

### **7.3.9 Outlook — Outlook & Next Steps / Further Research**

# Frontmatter

# Prefatory Apparatus: Illustrations and Terminology — Quick References

## List of Tables

Table 1: Table name

Table 2: Table name

Table 3: Table name

- Figure 1.1: The coordination crisis in AI governance - visualization of fragmentation
- Figure 2.1: The Carlsmith model - DAG representation
- Figure 3.1: Research design overview - workflow diagram
- Figure 3.2: From natural language to BayesDown - transformation process
- Figure 4.1: ARPA system architecture - component diagram
- Figure 4.2: Visualization of Rain-Sprinkler-Grass\_Wet Bayesian network - screenshot
- Figure 5.1: Extraction quality metrics - comparative chart
- Figure 5.2: Comparative analysis of AI governance worldviews - network visualization
- Table 2.1: Comparison of approaches to AI risk modeling
- Table 3.1: Probabilistic translation guide for qualitative expressions
- Table 4.1: System component responsibilities and interactions
- Table 5.1: Policy impact evaluation results - summary metrics

# List of Graphics & Figures

## List of Abbreviations

esp. especially

f., ff. following

incl. including

p., pp. page(s)

MAD Mutually Assured Destruction

- AI - Artificial Intelligence
- AGI - Artificial General Intelligence
- ARPA - AI Risk Pathway Analyzer
- DAG - Directed Acyclic Graph
- LLM - Large Language Model
- MTAIR - Modeling Transformative AI Risks
- P(Doom) - Probability of existential catastrophe from misaligned AI
- CPT - Conditional Probability Table

## Glossary

- **Argument mapping:** A method for visually representing the structure of arguments
- **BayesDown:** An extension of ArgDown that incorporates probabilistic information
- **Bayesian network:** A probabilistic graphical model representing variables and their dependencies
- **Conditional probability:** The probability of an event given that another event has occurred
- **Directed Acyclic Graph (DAG):** A graph with directed edges and no cycles
- **Existential risk:** Risk of permanent curtailment of humanity's potential
- **Power-seeking AI:** AI systems with instrumental incentives to acquire resources and power

- **Prediction market:** A market where participants trade contracts that resolve based on future events
- **d-separation:** A criterion for identifying conditional independence relationships in Bayesian networks
- **Monte Carlo sampling:** A computational technique using random sampling to obtain numerical results

## Headings & Potential Headings

Notes

Ideas

**Key insight:** This concept connects to X theory

## Implementation Details

The extraction process consists of three main stages...
